About

As a Software Developer, I build web and mobile applications using JavaScript, TypeScript, React, Vue.js, C#, Flutter, and SQL. I have worked on projects involving front-end development, CRUD, REST APIs, responsive design, and component-based architecture.

Experiences

EduCore (July 2025 - current)

Software Developer

- I managed the front-end processes—from concept to development—for web-based products tailored to user needs.
- I designed and implemented web applications aimed at real-world use cases by developing digital solutions focused on education and product management.
- I built the front-end architecture for projects using React and Vue.js, focusing on user experience, responsive design, and sustainable code structure.
- During the product development process, I identified new features and created user flows

Icesoft Yazılım Teknolojileri (July 2025 - October 2025)

Software Developer

- I developed a responsive web application using Vue.js and TypeScript to perform CRUD (Create, Read, Update, Delete) operations on student records.
- Using Bootstrap and Element Plus, I designed modern, user-centered interfaces that adapt to different screen sizes.
- I enhanced the application's usability and user experience by integrating features such as class filtering, pagination, form validation, and user notifications.
- I ensured data persistence using LocalStorage

TNC Group – Software Personel certificate (09.02.2026 - 16.03.2026)

Software Development Training

- Product Management Application: I developed a CRUD web application using HTML5, CSS3, JavaScript, React.js, and Bootstrap that includes functions for adding, deleting, updating, and listing products.
- Mini Catalog: I developed a mobile app using Flutter and Dart that features REST API integration, product listing, product details, and shopping cart management.
- SQL Database Work: I performed operations such as creating tables, inserting, updating, and deleting data, as well as querying data using SQL.
- 3D Modeling: Blender and SolidW

Education

- 2023–2025: Istanbul Gelişim University, Computer Technologies

Skills

- Frontend: HTML5, CSS3, JavaScript, TypeScript, React.js, Vue.js, Bootstrap, Element Plus, Responsive Web Design
- Programming: C++, Java, Dart, Object-Oriented Programming (OOP)
- Data & API: REST API, LocalStorage, CRUD Operations, JSON
- Mobile: Flutter, Android/iOS Development
- Tools: Git, GitHub, VS Code, Android Studio
- OS Administration

Project

- **Student Management System:** Student CRUD app using Vue.js, TypeScript, and Bootstrap.
- **Product Management Application:** Responsive React app with product CRUD and LocalStorage.
- **Market Automation System:** Product, inventory, cart, and sales management system.
- **Personnel Data Test Application:** C# WinForms and SQL Server desktop app with authentication.
- **Mini Catalog:** Flutter app with product listings, details, and cart.
- **Calculator:** Flutter calculator with a modern UI.
